

# PulseKPI

## Frontend UI/UX Blueprint & Roadmap

---

Dokumen patokan visual, arsitektur frontend, roadmap eksekusi, dan checklist kualitas UI/UX

Version 1.0 | Laravel + Filament + Blade + Tailwind | Prepared for PulseKPI

**Tujuan dokumen: memastikan seluruh eksekusi UI/UX PulseKPI konsisten, aman, ringan, mudah dipakai HRD/Manager/Employee/Approver, dan siap dijadikan acuan kerja Codex/Claude di VS Code.**

# Daftar Isi

1. Executive Summary
2. Tujuan, Prinsip, dan Scope UI/UX
3. Visual Direction dan Brand System
4. Information Architecture dan Role-Based Navigation
5. Blueprint Halaman Utama
6. Component System dan Design Tokens
7. Technical Frontend Architecture
8. Roadmap Eksekusi UI/UX
9. Acceptance Criteria dan Definition of Done
10. QA, Accessibility, Security, dan Performance Checklist
11. Prompt Eksekusi Codex/Claude per Sprint
12. Backlog dan Future Enhancement

# 1. Executive Summary

PulseKPI sudah memiliki mesin backend yang kuat: organization management, KPI template engine, assignment, assessment, approval, dashboard, report, export, dan hardening go-live. Tahap berikutnya adalah mengemas mesin tersebut menjadi pengalaman frontend yang profesional, ringan, rapi, dan mudah dipahami oleh setiap role.

Blueprint ini mendefinisikan arah visual, struktur halaman, design system, frontend architecture, roadmap sprint, quality gate, dan prompt eksekusi AI Agent agar implementasi UI tidak melebar dan tidak merusak logic bisnis yang sudah stabil.

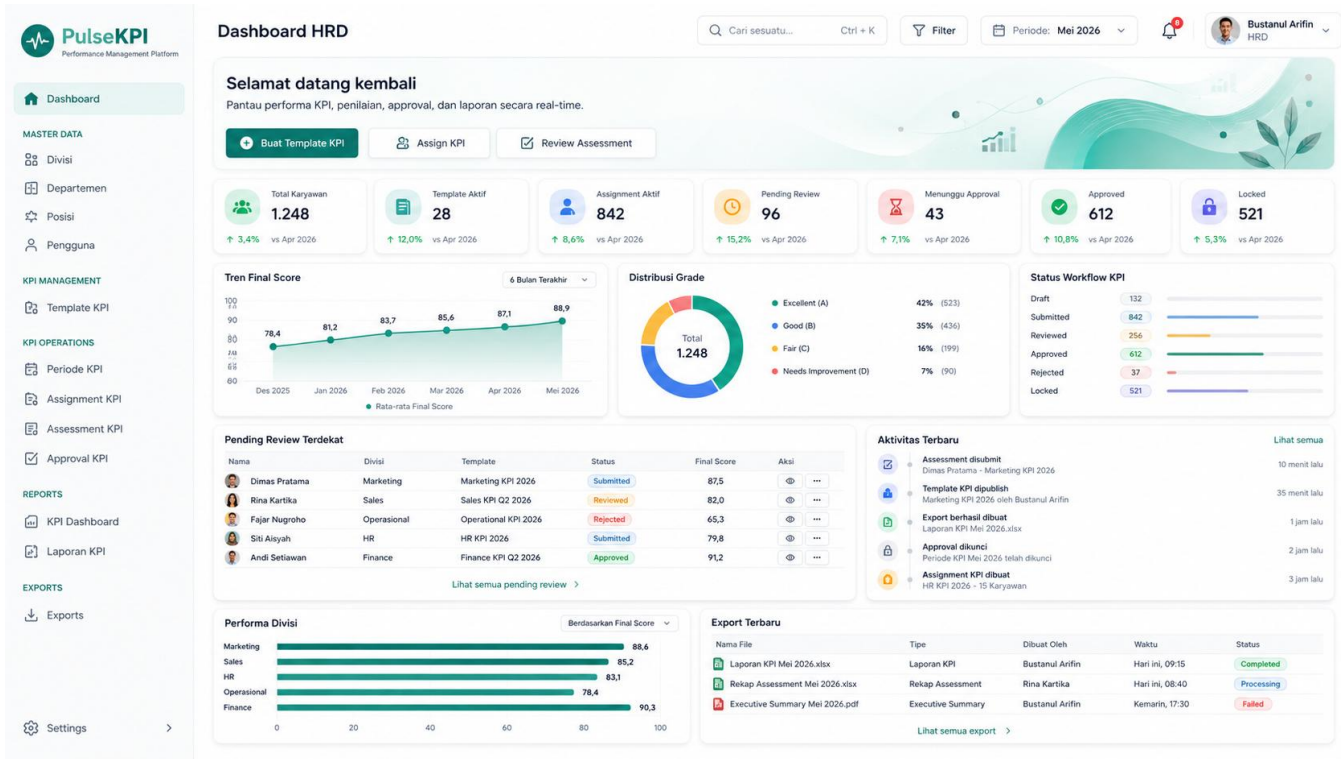

| Aspek            | Keputusan UI/UX                                                                                          |
|------------------|----------------------------------------------------------------------------------------------------------|
| Visual style     | Modern SaaS dashboard, white surface, soft shadows, rounded cards, emerald/teal + navy.                  |
| Frontend stack   | Blade + Tailwind untuk user-facing pages; Filament custom pages/widgets untuk admin panel.               |
| Prioritas utama  | Login, forgot/reset password, Filament dashboard HRD, employee self-service, status badge, empty states. |
| Security rule    | UI polish tidak boleh melemahkan Policy, scope query, evidence/export authorization, atau workflow lock. |
| Performance rule | Dashboard tetap lewat service/cache/aggregate query; hindari query berat di Blade.                       |

## Dokumen Ini Menjawab

- Bagaimana tampilan PulseKPI seharusnya terasa secara brand dan UX.
- Halaman apa saja yang harus dipoles dan urutannya.
- Komponen UI apa saja yang perlu distandardisasi.
- File Laravel/Filament mana yang akan disentuh.
- Roadmap implementasi yang cocok untuk Agent AI di VS Code.
- Checklist agar UI rapi tanpa mengorbankan keamanan dan performa.

## Referensi Visual Utama

Mockup berikut menjadi arah visual dashboard HRD PulseKPI. Implementasi tidak harus 100% pixel-perfect, tetapi harus menjaga rasa visual yang sama: bersih, modern, high-trust, dan enterprise-ready.

Gambar 1. Referensi dashboard HRD PulseKPI.

## 2. Tujuan, Prinsip, dan Scope UI/UX

### 2.1 Tujuan UI/UX

- Membuat PulseKPI terasa sebagai platform profesional, bukan sekadar panel CRUD.
- Memudahkan HRD memahami alur kerja KPI dari template sampai export.
- Menyediakan pengalaman employee self-service yang sederhana dan informatif.
- Menjaga konsistensi visual antara halaman auth, user, dan admin panel.
- Mengurangi biaya training user melalui navigation, empty state, label, dan status yang jelas.

### 2.2 Prinsip Desain

| Prinsip                 | Makna Praktis                                                                        |
|-------------------------|--------------------------------------------------------------------------------------|
| Clarity first           | Setiap halaman harus menjawab: saya di mana, harus melakukan apa, dan statusnya apa. |
| Role-aware UX           | HRD, Manager, Employee, Approver tidak melihat UI yang tidak relevan.                |
| Trustworthy visual      | Gunakan warna tenang, spacing lega, typography jelas, dan status badge konsisten.    |
| Security by design      | Menu tersembunyi bukan security. Policy dan scoped query tetap sumber kebenaran.     |
| Performance-conscious   | Tampilan boleh premium, tetapi query dan asset harus ringan.                         |
| Progressive enhancement | UI diperbaiki bertahap tanpa mengganti ulang business logic.                         |

### 2.3 Scope UI/UX

| Masuk Scope                                                                            | Tidak Masuk Scope                                                           |
|----------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| Auth pages: login, forgot password, reset password, verify email, register bila aktif. | Mengubah logic autentikasi Breeze, validasi password, atau flow security.   |
| Filament branding, navigation group, labels, empty states, status badges.              | Mengubah permission, policy, approval transition, atau calculation formula. |
| Dashboard HRD custom page dan widgets.                                                 | Menambah fitur analytics baru di luar data existing.                        |
| Employee dashboard dan assessment detail read-only.                                    | Membuka akses data lintas role.                                             |
| Component system: cards, buttons, inputs, badges, table polish.                        | Migrasi besar ke frontend SPA kecuali ada keputusan project baru.           |

### 3. Visual Direction dan Brand System

Arah visual PulseKPI menggabungkan rasa clean enterprise dashboard dengan sentuhan modern SaaS. Warna emerald/teal merepresentasikan pertumbuhan, stabilitas, dan performa. Navy memberi kesan aman, corporate, dan high-trust.

#### 3.1 Logo dan Brand Asset

Gambar 2. Logo PulseKPI 3D sebagai referensi brand direction.

| Asset           | Path Rekomendasi                              | Catatan                                    |
|-----------------|-----------------------------------------------|--------------------------------------------|
| Logo full       | public/images/branding/pulsekpi-logo-full.png | Dipakai di login, sidebar, dan header.     |
| Logo mark       | public/images/branding/pulsekpi-logo-mark.png | Dipakai untuk favicon, mobile, card kecil. |
| Favicon         | public/favicon.png atau logo mark             | Usahakan square 256x256 atau 512x512.      |
| Hero decoration | resources/images/branding/hero-wave.svg       | Opsional, untuk auth dan dashboard hero.   |

#### 3.2 Color Tokens

| Token           | Hex     | Penggunaan                                            |
|-----------------|---------|-------------------------------------------------------|
| Primary Emerald | #0F9D8A | Tombol utama, active menu, line chart, badge positif. |
| Primary Dark    | #087A6F | Hover state, heading aksen, active state.             |
| Navy            | #0B2F4F | Wordmark KPI, heading kuat, sidebar text.             |
| Slate           | #334155 | Body text dan label.                                  |
| Muted Slate     | #64748B | Subtitle, helper text, meta.                          |
| Surface         | #FFFFFF | Card dan panel.                                       |
| Background      | #F8FAFC | Halaman utama dan admin background.                   |
| Warning         | #F59E0B | Pending review, reviewed, perhatian.                  |
| Danger          | #E11D48 | Rejected, failed, critical action.                    |
| Success         | #10B981 | Approved, completed, positive trend.                  |
| Info            | #2563EB | Submitted, processing, info action.                   |
| Indigo          | #4F46E5 | Locked/reviewed secondary status.                     |

#### 3.3 Typography dan Spacing

| Token           | Rekomendasi                                                       |
|-----------------|-------------------------------------------------------------------|
| Font            | Aptos / Inter / system sans-serif. Gunakan satu family konsisten. |
| Page title      | 28-32px, bold, warna slate/navy.                                  |
| Section heading | 18-22px, semibold.                                                |
| Body text       | 14-16px, warna slate.                                             |
| Helper text     | 12-14px, warna muted slate.                                       |

|              |                                         |
|--------------|-----------------------------------------|
| Card radius  | 16-24px.                                |
| Card padding | 20-32px tergantung density.             |
| Shadow       | Soft shadow, hindari heavy drop shadow. |

## 4. Information Architecture dan Role-Based Navigation

Navigasi harus mengikuti proses bisnis KPI, bukan nama tabel database. Label teknis seperti KpiTemplateItem, KpiScoreRule, atau relation manager tidak boleh terlihat ke end-user.

### 4.1 Admin Sidebar Structure

| Navigation Group | Menu                                                      | Tujuan                                    |
|------------------|-----------------------------------------------------------|-------------------------------------------|
| Dashboard        | Dashboard HRD, KPI Dashboard                              | Ringkasan dan monitoring.                 |
| Master Data      | Divisi, Departemen, Posisi, Pengguna                      | Setup organisasi.                         |
| KPI Management   | Template KPI                                              | Membangun template dan komponen KPI.      |
| KPI Operations   | Periode KPI, Assignment KPI, Assessment KPI, Approval KPI | Operasional siklus KPI.                   |
| Reports          | KPI Dashboard, Laporan KPI                                | Analisis dan laporan.                     |
| Exports          | Exports                                                   | Riwayat export dan download file private. |

### 4.2 Role-Based Experience

| Role        | Dashboard Utama     | Prioritas UI                                         | Batasan Akses                                            |
|-------------|---------------------|------------------------------------------------------|----------------------------------------------------------|
| Super Admin | Dashboard HRD/Admin | Monitoring penuh, user management, config, audit.    | Full access tetapi tetap menjaga locked-state integrity. |
| HRD         | Dashboard HRD       | Template, assignment, review, reports, export.       | Tidak approve/lock jika policy Approver-only.            |
| Manager     | Team KPI Dashboard  | Assessment bawahan, revisi rejected, team summary.   | Hanya direct subordinate.                                |
| Employee    | My KPI Dashboard    | Status KPI, score, grade, assessment detail.         | Hanya data sendiri.                                      |
| Approver    | Approval Dashboard  | Reviewed/approved/locked queue, approve/reject/lock. | Tidak melihat draft/submitted sebelum reviewed.          |

## 5. Blueprint Halaman Utama

### 5.1 Auth Pages

| Halaman             | Tujuan UX                                                   | Elemen Utama                                                     | Acceptance Criteria                               |
|---------------------|-------------------------------------------------------------|------------------------------------------------------------------|---------------------------------------------------|
| Login               | Membuat first impression premium dan terpercaya.            | Logo, title, helper copy, email/password, remember, forgot link. | Render cepat, responsive, CSRF aman, error jelas. |
| Forgot Password     | Membantu user reset password tanpa bingung.                 | Email input, helper copy, tombol kirim, back to login.           | Tidak membocorkan status email terdaftar.         |
| Reset Password      | Membuat user yakin mengganti password.                      | Email, password baru, konfirmasi password, security copy.        | Route Breeze tetap bekerja.                       |
| Register jika aktif | Registrasi sederhana dengan approval admin bila dibutuhkan. | Nama/email/WA/password atau sesuai scope.                        | Tidak otomatis memberi akses admin.               |

### 5.2 Dashboard HRD

| Section            | Konten                                                                                        | Sumber Data                               |
|--------------------|-----------------------------------------------------------------------------------------------|-------------------------------------------|
| Hero Welcome       | Selamat datang kembali, quick actions: Buat Template KPI, Assign KPI, Review Assessment.      | Resource URLs dan permission.             |
| Summary Cards      | Total karyawan, template aktif, assignment aktif, pending review, approval, approved, locked. | HrdDashboardService aggregate.            |
| Trend Final Score  | Line chart 6 bulan terakhir.                                                                  | Average final_score per month.            |
| Grade Distribution | Donut chart grade.                                                                            | Group by grade.                           |
| Workflow Status    | Draft/submitted/reviewed/approved/rejected/locked.                                            | Group by status.                          |
| Pending Review     | Submitted assessments terbaru.                                                                | KpiAssessment status submitted.           |
| Recent Activity    | Assessment submitted, template published, export completed, approval locked.                  | Activity log atau fallback records.       |
| Performa Divisi    | Average final score per division.                                                             | Division + users + assessments aggregate. |
| Export Terbaru     | File, type, requester, time, status.                                                          | KpiReportExport.                          |

### 5.3 Employee Self-Service

- My KPI Dashboard menampilkan latest assignment, latest assessment status, final score, grade, dan history singkat.
- Assessment detail harus read-only, memakai snapshot item fields, dan menampilkan approval history tanpa path file evidence.
- Navigation user harus sederhana: Dashboard, My KPI, Assessment History, Profile/Logout.
- Tidak boleh ada link ke admin report atau data organisasi global.

### 5.4 Manager dan Approver Dashboard

| Role     | Widget Minimal                                                         | Action Utama                                        |
|----------|------------------------------------------------------------------------|-----------------------------------------------------|
| Manager  | Team members, to assess, rejected to revise, submitted, average score. | Create/update/submit assessment direct subordinate. |
| Approver | Pending approval, approved, locked, rejected by approver.              | Approve, reject, lock reviewed/approved assessment. |

## 6. Component System dan Design Tokens

Component system membuat UI konsisten, mempercepat implementasi, dan menghindari styling random antar halaman.

### 6.1 Core Components

| Component        | Penggunaan                                        | Class/Implementation              |
|------------------|---------------------------------------------------|-----------------------------------|
| Auth Card        | Login, forgot, reset, confirm password.           | Blade + Tailwind: pk-auth-card.   |
| Primary Button   | Main action seperti Login, Buat Template, Submit. | bg emerald gradient, rounded-2xl. |
| Secondary Button | Back, cancel, non-primary action.                 | border slate, white surface.      |

|              |                                       |                                           |
|--------------|---------------------------------------|-------------------------------------------|
| Status Badge | Workflow state dan export status.     | Color token per status.                   |
| Metric Card  | Dashboard summary.                    | Rounded card, icon circle, value, trend.  |
| Empty State  | Tidak ada template/assessment/export. | Icon, explanation, next action.           |
| Data Table   | Report, pending review, export list.  | Readable density, badges, action buttons. |
| Chart Card   | Trend, grade, division performance.   | Filament ChartWidget + service.           |

## 6.2 Status Badge Standard

| Status     | Color        | Makna                                  |
|------------|--------------|----------------------------------------|
| Draft      | Gray         | Belum final / sedang disusun.          |
| Assigned   | Blue         | KPI sudah diberikan kepada employee.   |
| Submitted  | Amber        | Assessment sudah dikirim manager.      |
| Reviewed   | Indigo       | Sudah direview HRD, menunggu approver. |
| Approved   | Green        | Disetujui approver.                    |
| Rejected   | Red/Rose     | Perlu revisi.                          |
| Locked     | Slate/Violet | Final dan tidak bisa diubah.           |
| Cancelled  | Gray/Red     | Dibatalkan.                            |
| Processing | Blue         | Export sedang diproses.                |
| Completed  | Green        | Export selesai.                        |
| Failed     | Red          | Export gagal.                          |

## 6.3 Empty State Copy Standard

| Page            | Empty State Copy                                                                          | Primary Action    |
|-----------------|-------------------------------------------------------------------------------------------|-------------------|
| KPI Templates   | Belum ada Template KPI. Mulai dengan membuat template sebagai dasar assignment KPI.       | Buat Template KPI |
| KPI Assignments | Belum ada KPI yang diassign. Assign template aktif ke employee untuk memulai penilaian.   | Assign KPI        |
| KPI Assessments | Belum ada assessment. Assessment akan muncul setelah KPI assignment dinilai oleh manager. | Lihat Assignment  |
| KPI Reports     | Belum ada data laporan sesuai filter. Ubah filter atau pilih periode lain.                | Reset Filter      |
| KPI Exports     | Belum ada export. Buat export dari halaman laporan KPI.                                   | Buka Laporan KPI  |

## 7. Technical Frontend Architecture

Frontend PulseKPI tetap mengikuti Laravel modern: Blade untuk user-facing pages, Filament untuk admin panel, Tailwind sebagai styling layer, dan service/action untuk data dashboard. Tidak ada business logic berat di Blade.

| Layer          | Teknologi                        | Tanggung Jawab                                              |
|----------------|----------------------------------|-------------------------------------------------------------|
| Auth UI        | Blade + Breeze + Tailwind        | Login, forgot password, reset password, verification.       |
| User UI        | Blade + Tailwind                 | My KPI dashboard, assessment detail, export/evidence links. |
| Admin UI       | Filament Pages/Resources/Widgets | HRD dashboard, tables, forms, actions.                      |
| Dashboard Data | Service + Action classes         | Scoped aggregate query, cache, chart dataset.               |
| Chart          | Filament ChartWidget / Chart.js  | Line, doughnut, bar chart.                                  |
| Access Control | Policy/Gate + scoped query       | Tidak mengandalkan hidden menu saja.                        |
| Asset          | Vite + public/images/branding    | Logo, favicon, CSS build.                                   |

### 7.1 File Map

| Area               | Files                                                                                         |
|--------------------|-----------------------------------------------------------------------------------------------|
| Branding config    | config/branding.php, .env.example                                                             |
| Auth layout/pages  | resources/views/layouts/guest.blade.php, resources/views/auth/*.blade.php                     |
| User pages         | resources/views/my/kpi-dashboard.blade.php, resources/views/my/kpi-assessments/show.blade.php |
| CSS tokens         | resources/css/app.css, tailwind.config.js if needed                                           |
| Filament provider  | app/Providers/Filament/AdminPanelProvider.php                                                 |
| HRD dashboard page | app/Filament/Pages/HrdDashboard.php                                                           |
| HRD widgets        | app/Filament/Widgets/Hrd*.php, resources/views/filament/widgets/*.blade.php                   |
| Dashboard service  | app/Services/Dashboard/HrdDashboardService.php                                                |
| Reports/export UI  | app/Filament/Resources/KpiAssessmentReports, KpiReportExports                                 |
| Tests              | tests/Feature/AuthUiTest.php, tests/Feature/Filament/HrdDashboardTest.php                     |

### 7.2 Security Boundaries

- UI polish tidak boleh mengubah KpiAssessmentPolicy, KpiReportExportPolicy, atau scoped query tanpa alasan eksplisit.
- Dashboard HRD hanya untuk HRD/Super Admin atau permission report/dashboard.
- Employee self-service routes harus auth dan policy protected.
- Evidence/export download tetap private dan authorized.
- Tidak boleh menampilkan path storage pada UI, PDF, atau export history.
- Tombol quick action harus dicek permission/resource accessibility sebelum ditampilkan.

## 8. Roadmap Eksekusi UI/UX

Roadmap ini disusun agar Agent AI bekerja fokus per sprint. Setiap sprint harus ditutup dengan quality gate dan review. Jangan membuat redesign besar dalam satu prompt tanpa checkpoint.

| Sprint | Nama                           | Scope                                                                     | Estimasi | Exit Criteria                                     |
|--------|--------------------------------|---------------------------------------------------------------------------|----------|---------------------------------------------------|
| UI-0   | Preparation & Asset Setup      | Logo files, branding config, CSS tokens, baseline screenshots.            | 1 hari   | Logo muncul, build aman.                          |
| UI-1   | Auth Experience Polish         | Guest layout, login, forgot, reset, confirm, verify, tests.               | 1-2 hari | Auth flow tetap aman dan tampilan matching brand. |
| UI-2   | Filament Branding & Navigation | AdminPanelProvider, groups, labels, colors, favicon.                      | 1 hari   | Sidebar dan admin shell terasa seperti PulseKPI.  |
| UI-3   | Custom HRD Dashboard           | HrdDashboard page, widgets, charts, pending review, activity, exports.    | 2-4 hari | Dashboard HRD mendekati mockup dan scoped.        |
| UI-4   | Employee Self-Service Polish   | My KPI dashboard, assessment detail, status badges, empty states.         | 1-2 hari | Employee bisa memahami KPI sendiri.               |
| UI-5   | Role Dashboards Polish         | Manager/Approver dashboard widgets dan action clarity.                    | 2-3 hari | Manager dan Approver punya flow jelas.            |
| UI-6   | Forms/Tables/Empty States      | Template, assignment, assessment, approval, report, export pages.         | 2-4 hari | CRUD terasa human-friendly, bukan database panel. |
| UI-7   | QA, Accessibility, Performance | Responsive QA, a11y, visual review, asset optimization, regression tests. | 1-2 hari | Ready for UAT.                                    |

### 8.1 Urutan Rilis yang Direkomendasikan

1. Rilis 1: Auth UI + branding config. Tujuannya first impression langsung rapi.
2. Rilis 2: Filament branding + HRD dashboard custom. Tujuannya admin terasa seperti platform.
3. Rilis 3: Employee self-service polish. Tujuannya user non-admin nyaman.
4. Rilis 4: Forms, tables, badges, empty states. Tujuannya operational flow lebih jelas.
5. Rilis 5: QA visual, responsive, accessibility, dan performance polish.

## 9. Acceptance Criteria dan Definition of Done

| Area            | Acceptance Criteria                                                                            |
|-----------------|------------------------------------------------------------------------------------------------|
| Branding        | Logo tampil di auth, admin, favicon. Warna konsisten emerald/navy. Tidak ada placeholder logo. |
| Auth            | Login, forgot, reset render rapi desktop/mobile. Breeze flow tidak rusak.                      |
| Admin Dashboard | Hero, quick action, stat cards, chart, workflow, table, activity, export list tampil rapi.     |
| User Dashboard  | Employee hanya melihat data sendiri dan layout read-only mudah dibaca.                         |
| Navigation      | Menu mengikuti proses bisnis. Hidden resources tetap hidden.                                   |
| Tables          | Read-only report/export tidak punya create/edit/delete action.                                 |
| Badges          | Semua status memakai warna konsisten.                                                          |
| Security        | Policy dan scoped query tidak melemah. Download evidence/export tetap private.                 |
| Performance     | Tidak ada query berat di Blade. Dashboard memakai service/cache/aggregate.                     |
| Tests           | Auth render, dashboard access, role denial, core regression tests pass.                        |

### Definition of Done per Sprint UI

- Semua halaman terkait bisa dibuka tanpa error.
- Tidak ada perubahan business logic yang tidak diminta.
- Tidak ada perubahan policy/scoped query kecuali disetujui.
- composer pint pass.
- php artisan test pass.
- PHPStan pass.
- npm run build pass.
- Manual browser check desktop dan mobile minimal dilakukan.
- Screenshot before/after disimpan untuk UAT internal jika diperlukan.

## 10. QA, Accessibility, Security, dan Performance Checklist

### 10.1 Visual QA Checklist

| Item            | Yang Dicek                                                   |
|-----------------|--------------------------------------------------------------|
| Desktop 1440+   | Auth, admin dashboard, report table, employee dashboard.     |
| Tablet 768-1024 | Auth card, navigation, dashboard cards wrap correctly.       |
| Mobile 360-430  | Login, forgot, my KPI dashboard usable.                      |
| Empty state     | Tidak ada text teknis, ada next action.                      |
| Badge           | Status warna konsisten dan readable.                         |
| Logo            | Tidak blur, tidak terlalu besar, tidak memperlambat loading. |

### 10.2 Accessibility Checklist

- Input memiliki label yang jelas.
- Button punya text, bukan hanya icon.
- Contrast cukup untuk text dan badge.
- Focus state tidak dihapus.
- Form error jelas dan dekat dengan field.
- Chart tidak menjadi satu-satunya cara membaca data; angka tetap tersedia.

### 10.3 Security Regression Checklist

| Check                                   | Expected                                |
|-----------------------------------------|-----------------------------------------|
| Employee akses /admin/hrd-dashboard     | Forbidden atau tidak muncul navigation. |
| Manager akses dashboard HRD             | Forbidden kecuali permission eksplisit. |
| Approver melihat draft/submitted report | Tidak bisa.                             |
| Evidence path di UI/PDF                 | Tidak terlihat.                         |
| Export path di UI                       | Tidak terlihat.                         |
| Locked assessment edit action           | Tidak tersedia dan policy menolak.      |
| Published template edit item/rule       | Tidak bisa.                             |

### 10.4 Performance Checklist

- Auth page image asset dikompres; jangan pakai PNG 5MB untuk logo.
- Dashboard cards memakai aggregate queries.
- Report table memakai pagination.
- Filament widget tidak memanggil query global berulang tanpa cache.
- Tidak ada Model::all() di Blade.
- NPM build ukuran asset diperhatikan.

## 11. Prompt Eksekusi Codex/Claude per Sprint

Gunakan prompt berikut sebagai starter. Setiap prompt bisa ditempel ke Codex/Claude di VS Code. Hindari menjalankan semua sprint sekaligus.

### 11.1 Prompt UI-1 Auth Experience Polish

**Tujuan:** Merapikan login, forgot password, reset password, dan guest layout agar matching dengan tema PulseKPI.

Read AGENTS.md and roadmap docs. Implement UI-1 Auth Experience Polish only. Create branding config, improve guest layout, login, forgot password, reset password, and auth component styling. Do not change auth logic, route names, CSRF, password broker, policies, or business logic. Run composer pint, php artisan test, PHPStan, and npm run build. Return changed files and whether safe to commit.

### 11.2 Prompt UI-3 Custom HRD Dashboard

Read AGENTS.md and roadmap docs. Implement Custom HRD Dashboard Filament UI based on the approved mockup. Create HrdDashboard page, HrdDashboardService, welcome widget, stats widget, chart widgets, workflow status, pending review table, recent activity, division performance, and latest exports. Do not change workflow/business logic or scoped visibility. Only HRD/Super Admin can access. Run quality gates and return results.

### 11.3 Prompt UI-4 Employee Self-Service Polish

Polish employee-facing My KPI Dashboard and assessment detail pages. Make them read-only, clear, responsive, and scoped to current user. Improve status badges and empty states. Do not expose admin reports, evidence paths, or other employee data. Add render/access tests and run quality gates.

### 11.4 Prompt UI-6 Forms/Tables/Empty States Polish

Polish Filament resource labels, form sections, table columns, badge colors, and empty states for KPI Templates, Assignments, Assessments, Approvals, Reports, and Exports. Do not change validation, calculation, workflow, policy, or query scope. Run quality gates and return changed files.

## 12. Backlog dan Future Enhancement

### 12.1 Backlog Prioritas Tinggi

- Dashboard filter periode langsung di hero/header.
- Custom chart styling agar makin mirip mockup.
- Activity timeline berbasis Spatie Activitylog yang lebih human-friendly.
- Role-specific dashboard: Manager, Approver, Employee dengan visual berbeda.
- Mobile navigation untuk self-service user.

### 12.2 Backlog Prioritas Menengah

- Skeleton loading state untuk dashboard cards.
- Dark mode opsional untuk admin panel.
- User avatar upload dan profile card.
- Chart tooltip custom dan labels lebih lengkap.
- Printable summary view untuk employee KPI.

### 12.3 Risiko dan Mitigasi

| Risiko                           | Dampak                          | Mitigasi                                                    |
|----------------------------------|---------------------------------|-------------------------------------------------------------|
| UI polish menyentuh policy/query | Data leak atau broken workflow. | Batasi perubahan UI; review diff policy/query.              |
| Dashboard terlalu berat          | Admin panel lambat.             | Aggregate query, cache, pagination, limit list.             |
| Logo terlalu besar               | Login lambat.                   | Kompres image dan gunakan ukuran web.                       |
| Label terlalu campur bahasa      | User bingung.                   | Tetapkan English sederhana atau Bahasa Indonesia konsisten. |
| Agent AI over-engineer           | Scope melebar.                  | Satu sprint satu prompt, quality gate, review.              |

## Lampiran A - Manual Review setelah UI Sprint

6. Buka /login, /forgot-password, /reset-password/{token}.
7. Buka /admin/hrd-dashboard sebagai HRD dan Super Admin.
8. Pastikan Manager/Employee/Approver tidak bisa membuka HRD dashboard.
9. Cek My KPI Dashboard sebagai Employee.
10. Cek report/export/evidence tidak menampilkan path private.
11. Cek desktop dan mobile minimal di browser devtools.
12. Jalankan composer pint, php artisan test, PHPStan, npm run build.
13. Commit dengan pesan spesifik, contoh: feat: polish PulseKPI auth UI.

**Rekomendasi final: mulai dari UI-1 Auth Experience Polish, lanjut UI-2 Filament Branding, lalu UI-3 Custom HRD Dashboard. Ini memberi dampak visual paling besar tanpa mengganggu mesin KPI yang sudah stabil.**
